

YACK – Your Agreement Contract Keeper

Students:

Benmalek Mohamed Aymen (Leader)

Kaizra Yacine

Mohamed Abdelillah Chadli

Submission Deadline: 25 October

Executive Summary

In Algeria, businesses and individuals commonly rely on oral agreements or signed but non-enforceable notes. YACK solves this by providing an accessible, secure, and tamper-evident mobile platform to create, sign, and authenticate digital contracts. Users can tap phones (via NFC) or scan QR codes to easily connect and sign contracts, which are hashed, time-stamped, and kept to prevent tampering.

Our target users are freelancers, artisans, and service professionals that need trustworthy proof of agreements without lawyers' fees or over-burdened legal mechanisms.

YACK's value proposition is its simplicity, offline-verifiable authentication, and automated proof collection. Limited free contracts per month are offered under the freemium model, with subscription tiers allowing unlimited use and enhanced features.

Revenues are forecast at \$5,000 in Year 1, \$25,000 in Year 2, and \$70,000 in Year 3, for national adoption. YACK will be successful as it addresses a pervasive trust deficiency in Algeria's informal labor market with accessible, mobile-led technology.

Mission Statement

Problem Statement:

There is no simple and trusted way for individuals or small businesses in Algeria to create, sign, and verify digital agreements securely.

Why this problem is interesting:

Most Algerians depend on informal verbal agreements, leading to misunderstandings, lost payments, and disputes. The lack of easy-to-use digital solutions makes legal contracting inaccessible. YACK bridges this gap through local-language simplicity, mobile-first access, and digital integrity protection.

Who faces this problem:

Freelancers, service providers, and small business owners who operate daily without written contracts.

Why it is important to solve the problem:

Disputes harm client trust and small-scale economies. Providing affordable digital contract tools empowers independent workers, protects clients, and improves accountability in informal markets.

Why your solution would be the best compared to existing solutions:

YACK is designed for Algerian users, and integrates instant proof generation, giving it a unique local advantage over global contract tools like DocuSign or HelloSign.

Vision Statement

Within 3–5 years, YACK aims to become the standard for digital agreements across North Africa, integrating government-level verification and AI-based fraud detection for certified contract management.

Market Research

Global market size: ~\$3.2 Billion (Digital Signature & E-Contract Market, 2025)

Regional market size (MENA): ~\$180 Million

Potential users (Algeria): 1.5–2 million freelancers and small business owners

Global market revenue: \$3.2B

Annual growth rate: ~26%

Projected market value (5 years): \$10B globally

Average revenue per user (ARPU): ~\$1.50/month

Customer lifetime value (CLV): ~\$24–30

Competitors and Existing Apps

Competitor 1: DocuSign

Overview: Global e-signature platform with cloud-based document workflows.

Key Stats:

Downloads: 10M+

Rating: 4.7★

Application Age: 11 years

Price model: Subscription (\$10–\$40/month)

Strengths: Established brand, full legal compliance

Weaknesses: Expensive, requires international payment, not localized for Algeria

Competitor 2: HelloSign

Overview: Dropbox-owned signing tool for business contracts.

Key Stats:

Downloads: 5M+

Rating: 4.5★

Price model: Subscription

Strengths: Integration with Google Drive & Dropbox

Weaknesses: Overly complex for individuals, not mobile-first

Competitor 3: SignNow

Overview: Simple e-signing app for teams.

Key Stats:

Downloads: 1M+

Rating: 4.4★

Price model: Subscription

Strengths: Reliable backend and API support

Weaknesses: No local pricing, not designed for freelancers

Product & Functionalities

YACK allows users to create, sign, and store legally verifiable contracts directly from their smartphones. Contracts are hashed for authenticity, timestamped for proof, and can include attachments as evidence, syncing when connected.

Primary Functionalities:

- Scan-to-Agree (NFC or QR)
- Create & Sign Contracts
- Proof Page (attach photos, messages, receipts)
- Contract Closure Agreement (both sides approve)
- Email Login / Sign-Up
- Ongoing Contract History & Notifications

Wish List Features:

- Multi languages support
- Face ID verification for signing
- GPS location stamping
- National ID signing
- Blockchain-based verification
- Arabic voice-to-text contract input

Mockups/Screen Wireframes:

1. Home screen
2. Proofs screen
3. Login screen

Business Models and Financial Projections

Revenue/Business Models:

- Freemium: Up to 5 free contracts/month
- Subscription: DZD 500–1500/month for unlimited contracts
- In-App Purchases: Certified evidence export, legal consultation access
- B2B Licensing: For small law firms or cooperatives

Financial Forecast:

Year 1: \$5,000

Year 2: \$25,000

Year 3: \$70,000

Estimated Expenses:

Development: \$6,000

Marketing: \$3,000

Cloud & Maintenance: \$2,000/year

Legal & Admin: \$1,500

Marketing and Strategies

Go-to-Market Strategy:

- Beta testing: Limited to Algerian freelancers
- Soft Launch: Algeria
- Full Launch: North Africa within 12 months

Launch Goals:

Downloads: 2,000

Active users: 1,000

Paid conversions: 5–10%

User Acquisition Strategy:

Pre-Launch:

- Social Media Teasers
- Educational Content
- Landing Page & Email list

Launch Phase:

- Paid ads
- Collaborations with freelancer associations
- Referral rewards

Growth Phase:

- Partnership with legal offices
- Sponsorships with coworking spaces
- Influencer campaigns

User Retention:

- In-app tips for contract creation
- Monthly free proof storage boosts
- Regular feature updates

Milestones

Week 4	Finalize project specs & user flow
Week 5	Design full UI/UX and build main Flutter widgets
Week 6	Start backend architecture (Firebase)
Week 7	Connect frontend to backend
Week 8	Build MVP and conduct internal tests
Week 9	Implement Proof Hub and Scan-to-Agree system
Week 10	Integrate freemium limits and subscriptions
Week 11	Beta test with 100 users
Week 12	Fix bugs, finalize UI polish
Week 13	Public release and submission
